6’ Sunblaster Power Cord With On/Off Switch	$8.85

SUNBLASTER
HORTICULTURAL PRODUCTS

“Modern Growing is changing the way we live and feel in today’s ever changing world. Nothing could assist us more than to have access to fresh and nutrition packed foods than have the power to change the way we feel. While some may think indoor growing is a trend or perhaps fad, it is not. It is a return to an old way of life where we took responsibility for our food intake and lived in the result of doing that.” (https://www.sunblasterlighting.com/our-products/grow-lighting/)

SunBlaster manufactures a wide range of lighting for your indoor growing applications. No matter what you want to grow, we have the right light for your application. Read more below or give us a call anytime for more information.

SunBlaster horticultural lighting allows you to extend the growing season by providing your plants with an indoor equivalent to mother nature's sunlight. This is a great advantage for those who appreciate having a year-round supply of fresh flowers, vegetables and herbs. Available in a variety of sizes, they fit neatly into most spaces and are perfect for growers looking to fully utilize their growing space by linking multiple T5HO grow lights in a daisy chain fashion.

Lightweight and easy to install almost anywhere.

T5HO LIGHTING KIT

Your kit includes
- Ballast
- T5HO Light
- 6' Power cord with rocker on/off switch
- Link cord 14"

PRISMATIC LENS LED STRIP LIGHTS

UPGRADE TO LED WHILE MAINTAINING A BUDGET

IMPROVED PERFORMANCE AT A LOWER COST

SUNBLASTER™ LED STRIP LIGHTS are designed to maximize overall performance, economy and extend longevity, while providing the best possible lighting for all indoor growing applications. Our Self-Cooling Technology allowed our engineers to push SunBlaster™ LED Strip Lights to maximize their output without creating excess heat, or wasting resources running cooling fans.

NEW PRISMATIC LENS LED STRIP LIGHTS. These high efficiency LED lights produce up to 20% higher light output by using a more efficient LED array. The light passes through a prism that focusses the light into a 90 degree beam angle rather than the usual 120-degree output. This brings more light energy to the plant canopy and stimulates faster growth.

MODERN GROWING
